

TSplus product line

With Terminal Service Plus® for Windows, it's easy to extend the reach of Windows applications to your corporate network or the Web. Without touching a single line of code, you can instantly make your Windows applications accessible from any device, platform or operating system. And best of all, Terminal Service Plus is the fast, simple and affordable solution that eliminates the complexity of other alternatives such as Windows Terminal Services (WTS) or Citrix Presentation Server.

With Terminal Service Plus, your Windows applications reside on a secure central server. Local and remote users running UNIX, Linux, Mac OS X, Windows, Windows Mobile, or Pocket PC devices simply load a tiny native client or a browser plug-in. The application then appears on their desktop just as though it were running locally. And thanks to our high-performance seamless RDP client, Terminal service Plus provides fast, efficient access, even over high latency dial-up lines and Internet connections.

Windows Application Access Made Easy

- Provides instant access to Windows applications from any device or platform
- Retains 100% of the application's features, functions and branding
- Eliminates the need for WTS or Citrix Presentation Server
- Publishes or Web-enables one or more Windows applications, not the entire desktop
- Integrates fully with existing platforms and infrastructure
- Offered on a cost-effective, concurrent licensing basis

Advanced Product Features

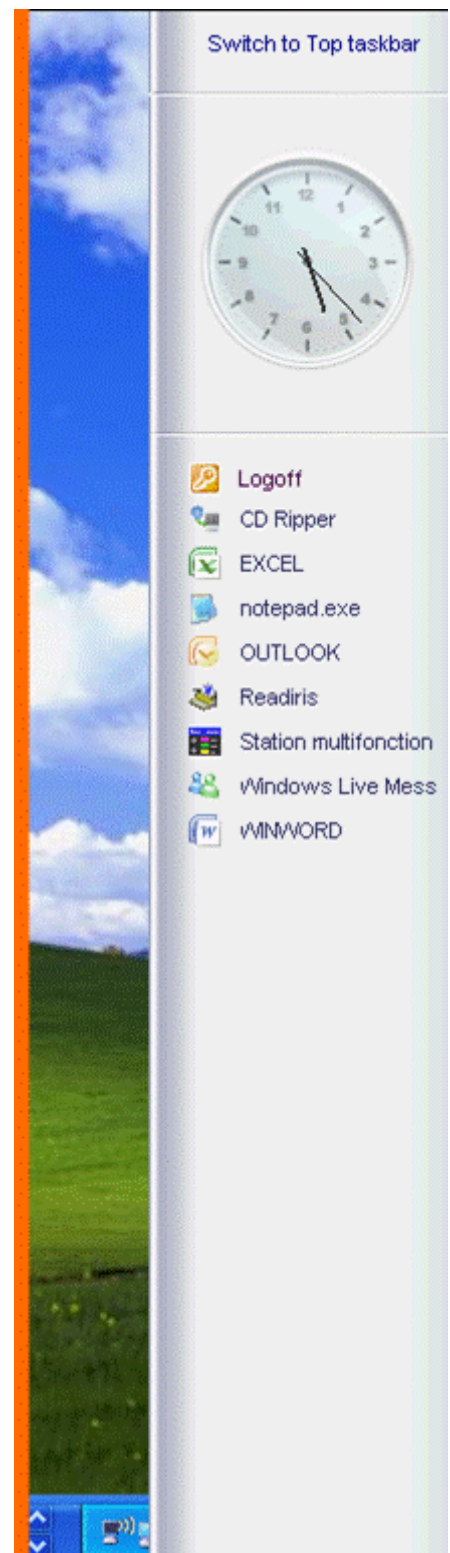

- Server-centric solution with near zero-footprint clients
- High performance over low-bandwidth connections
- Secure operation using native server security, USB stick with serial number control client access and encryption.
- Complete cross-platform compatibility
- Integrated load balancing and failover
- Universal print driver, file access, and clipboard support
- Session reconnect and shadowing

The Transparent Solution

Terminal Service Plus is completely transparent to your users. Remote applications look and feel exactly the same as natively running applications. So you'll save time and retraining costs. And as an ISV or an enterprise, you can private label the solution to promote your own branding. Software development kits (SDKs) are also available for customized solutions.

Lowering Costs and Simplifying Management

Deploying and maintaining traditional distributed applications can be costly and time-consuming. Terminal Service Plus is the simple solution with easy user administration. Application issues can be solved at the central site, not at individual client desktops. And unlike our competitor's per seat licensing, Terminal Service Plus is offered on a concurrent licensing basis. This saves money and eliminates the need to dedicate scarce IT resources to managing seats.

Maximizing the Value of Current Investments

Now your employees, business partners, and customers can painlessly and cost-effectively access your existing Windows applications from anywhere. Terminal Service Plus supports a wide variety of client devices, such as heterogeneous desktops, Web browsers, and mobile and wireless devices.

Terminal Service Plus maximizes the value of your current Windows applications. You'll reduce operating costs, lower bandwidth consumption, and eliminate retraining and reengineering costs. And unlike some competitors who force a whole new application management structure, Terminal Service Plus leverages your existing management infrastructure investments. The net result is faster ROI.

System Requirements

Server

- Windows XP Home
- Windows XP Professional SP2 or SP3
- Windows Vista Professional Edition
- Windows Vista Corporate Edition
- Windows Vista Ultimate Edition
- Windows 2003 SBS (without TSE CALs)
- Windows 2003 Server with TSE CALs
- 1 GB RAM
- 500 MB disk space
- TCP/IP connectivity
- DSL or higher connection

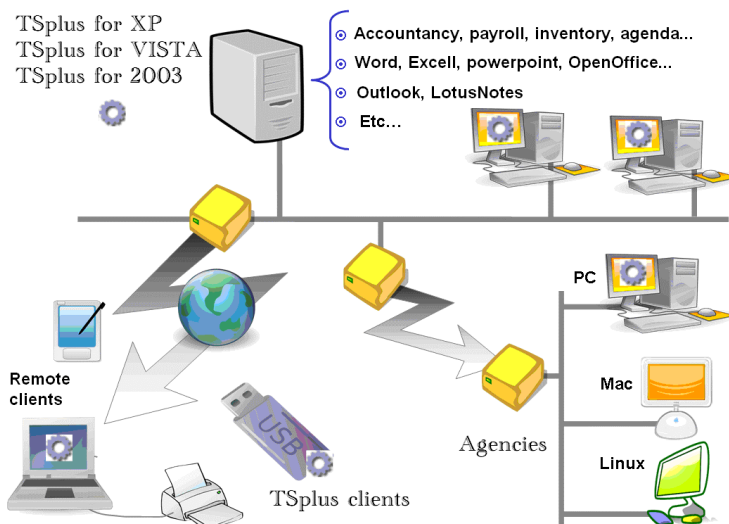

Windows Client

- TSplus Seamless client: XP, VISTA, 2003
- TSplus RDP client: 95/98, 2000, XP, VISTA, 2003
- Pocket PC with one RDP client
- Laptop and notebook with TSplus client
- Thinclient device with one RDP client
- Linux with Rdesktop Client
- Mac OS X with RDP client
- Mobile/Handheld Device with one RDP client
- Browser Plug-in: Internet Explorer

The Secure Solution

Terminal Service Plus transmissions are fully encrypted using Microsoft RDP based technology. What's more, your applications and mission-critical data remain secure on the server behind your corporate firewall. Only the application's user interface is transmitted to client devices.

The Terminal Service Plus clients makes it easy to Web-enable Windows applications for secure, cross platform deployment to local and remote users everywhere.

Using the physical USB stick number to lock the client access program to one specific USB stick is adding a great level of security. This even better using finder print protected USB drive and this eliminate the need for complex VPN solutions.
